

## **SKYTEC XD-2**

Maximum performance in the machining  
of PCD and PCBN

# SKYTEC XD-2

Latest diamond qualities, maximum grain volume and adapted bond systems characterize the new SKYTEC XD-2 product line. The grinding tools impress with an extremely high removal rate at the same time reduced wear and optimal chipped edges on the ground workpiece.

## Application

Circumferential grinding of an indexable insert with SKYTEC XD-2

### + Highest Lifetime

Long service life and thus shortened non-productive process times are achieved by a strong bonding strength of the diamond grain in ceramic bond.

### + Reduced grinding times

New diamond qualities in combination with the stronger bond system leads to increased stock removal rates and short grinding cycles.

### + High cutting-edge quality

Due to the special combination of diamond and bond content the high quality requirements in PKD/PCBN machining can be fulfilled optimally.

## Extensive stock range

For your quick availability, various shapes and specifications for the most common machine types are available from stock.
